Every figure below is taken from the firm's own Form ADV: Part 1 for the reported figures and the Part 2A brochure for custodians. Indented rows are the underlying data that feeds the input above them; they carry no weight of their own. Every rank is a position within your peer group of 998 firms its size, never against the whole market: a firm at the 60th percentile on an input sits ahead of 60% of that group on it.

Three inputs, weighted 50 / 30 / 20. Higher output per person or location ranks higher.

Methodology. Every input is ranked within a peer group of firms of similar assets under management, never against the full market. Every input is ranked the same way, with no bespoke scale, threshold or lookup table. The three component scores are combined multiplicatively, with productivity as the base and complexity and growth applied as rounded adjustment factors, so that each raises or lowers the credit productivity earns without being able to substitute for it. The result is ranked within the peer group and published as a percentile against that group, bounded at 1 and 99 so that no firm shows 0 or 100. Full input definitions and known limitations are described in the public methodology summary, How the index works. The specific weights and combination parameters are set by judgment; they are disclosed to each firm during its review and are not published.

Important disclosures. This document is a preliminary working draft prepared for methodology review and data verification. It has not been finalized or independently verified, and all figures are subject to change. It is provided for informational and discussion purposes only. Inputs are derived solely from publicly available Form ADV filings: Part 1 as most recently filed and on record with the SEC on October 1, 2026, and the firm's Part 2A brochure for custodial relationships. Because advisers file and amend Form ADV on their own schedules, the underlying figures carry different as-of dates from one firm to the next and may be as much as several quarters old. Assets under management, client counts, advisory personnel, office locations and custodial relationships may since have changed. Figures may also be incomplete or inaccurate where a filing is ambiguous or a data point is not reported. The Operating Efficiency Index is a relative measure of operating characteristics within a peer cohort. It is not a rating, ranking, endorsement, audit, valuation, or assessment of investment performance, advisory quality, financial condition, or regulatory standing, and it should not be relied upon for any investment, business, or personnel decision. Component weights reflect the authors' judgment and have not been validated against outcomes. No firm named in this document has participated in, reviewed, sponsored, or endorsed this analysis, and no affiliation with or endorsement by any named firm is implied. Historical growth figures are not indicative of future results.
